

BACKUP as a SERVICE (BUaaS)

BACKUP as a SERVICE (BUaaS)

Leading Edge Data Centres BUaaS solution provides clients with a seamless backup process which provides an easy-to-use platform to manage all backup data, backup schedules, and restorations quickly. Clients using this solution have the peace of mind of knowing all their data is safely and securely backed up regularly and data can be restored at any time.

Customised BUaaS Solutions

We have three main options for customers of various sizes and requirements, and we can also customise a specific BUaaS solution for specialised configurations:

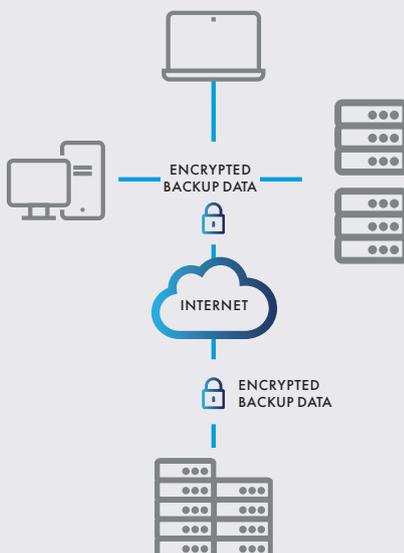

< 5

EASY-BUaaS

Designed for businesses with 1 to 5 staff. Easy-BUaaS will encrypt all backup data and transfer it to one of our secure BUaaS data centres (your choice of BUaaS data centre) using your internet connection. Your backup data is always available for you to access if you need to retrieve or restore immediately.

Easy-BUaaS Configuration

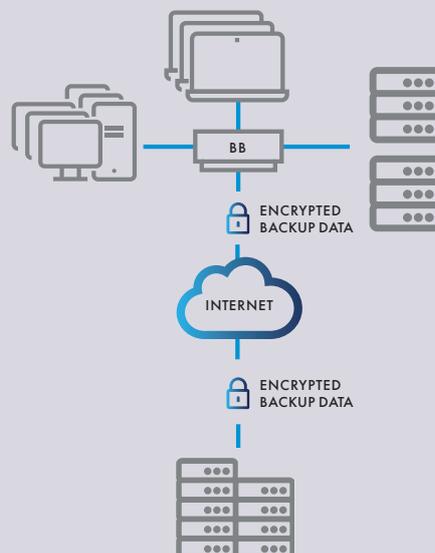

5-10

BB-BUaaS

Designed for businesses with 5 to 20 staff. BB-BUaaS (Backup Box BUaaS) is added to the customers network. Backup data passes through the BB to be managed and then transferred to one of our secure BUaaS data centres via your internet connection. BB allows immediate, restore of files or complete systems over the local network without having to rely on an internet connection. This is especially useful if the internet connection is unavailable.

BB-BUaaS Configuration

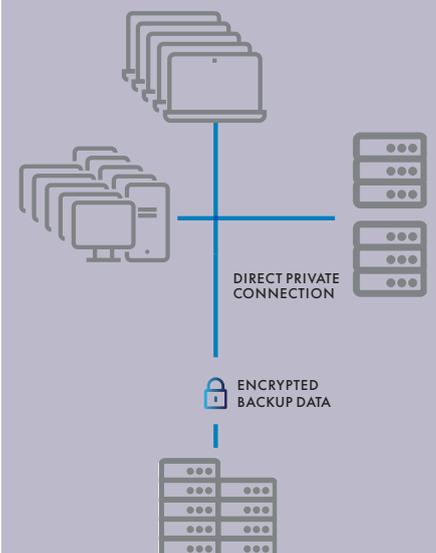

20 +

DIRECT-BUaaS

Designed for businesses with staff numbers greater than 20, or customers who have dedicated private connections to one of our data centres. All devices on the customers premises are backed up directly to one of our secure BUaaS data centres via a dedicated private connection.

Direct-BUaaS Configuration

BACKUP as a SERVICE (BUaaS)

One-click Installation

Customers can backup all data from their devices in the office including desktops, laptops, and on-premise servers through a simple one-click installation of a Leading Edge Data Centres software agent on each device.

Once each device has the software agent installed, clients can choose to:

- Backup selected files and folders only
- Completely backup all data
- Set the frequency of backups (e.g.: every 15 minutes, hourly, daily, weekly, or monthly)
- Set the period of time that each backup should be kept for in secure storage

Fully Managed

The BUaaS solution is a fully-managed solution where the client can make any requests to our NOC backup specialist team (via the portal ticketing system) where we conduct all backup-related processes, including installing agent software on client devices, managing the backup schedule and retention periods for different levels of sensitive data, and restoring files and systems when necessary. Our specialist backup staff also work with our NOC alerting centre, and will actively and immediately respond to any alerts generated from the NOC and action restorations promptly. The client is also informed of each process as it happens, and receives confirmation once systems have been fully restored.

Simple Recovery

If, for any reason, a specific file needs to be recovered, or a whole desktop or server needs to be restored, the simple interface that customers can access allows them to quickly find the file from a previous backup and replace it immediately, or restore the whole system at the click of a button.

Always-ready Cloud Infrastructure

A major advantage in using our BUaaS solution with your servers, whether they are on premise or in one of our data centres, is that, in the event of a hardware failure in the primary environment where a restore back to the primary equipment is not possible, all our secure BUaaS data centres have always-ready cloud infrastructure on the network, and act as failover servers to get your services back online through the restoring of backup images in the least amount of time.
